

ABSTRACT OF THE DISCLOSURE

A silver halide photographic emulsion comprising
silver halide grains, wherein a variation coefficient
of equivalent-circle diameters of all the silver halide
5 grains is 30% or less, and 70% or more of the total
projected area of the silver halide grains are occupied
by silver halide grains each meeting requirements (i),
(ii), and (iii) below:

10 (i) silver bromochloroiodide grain having (111)
faces as main planes,
(ii) having an epitaxial portion junctioned to at
least one apex portion thereof, and
(iii) having at least one dislocation line in an
epitaxial portion thereof.
